

Jeremiah into Here vs South

We've heard testimony this evening on the negative impacts of this proposal from - transport issues - roadway - local traffic

sprayaside - air quality open cars diesel. they coming back
water quality acidification / fine particulate / BOD

Climate Change

- What I want to really address concerns the projected benefits associated with this proposal.

• Local jobs ~ several 1000 jobs

\$ had understand inconvenience

• China (main importer) > 60% imported from Australia
US 2-4% Indonesia (2001)

Want break into this market? China's Coal demand projected to peak by 2030

How much of the required infrastructure increase and/or maintenance or mitigation of the increased use would be funded by public money?

~~what~~ How will that impact future generations ability to use this infrastructure? this site?

As an environmentalist, I care from cost/benefit I know from science

As an engineer, I perform cost/benefit analysis on a daily basis

Even if you challenge the scientific basis for the negative costs of this project, I challenge you as a local community to verify the supposed economic benefit that this project

* Jobs? Fishing? Hospitality? Tourism? Van-operated Convention Center - to capitalize on setting.
